**Presentazione della ditta M.I.D.A. Informatica s.n.c.. Atlanti, Vol. 20, Trieste 2010, pp. 429-431.**

**Predstavitev tvrdke M.I.D.A. Informatica s.n.c.. Atlanti, Zv. 20, Trst 2010, str. 429-431.**

M.I.D.A. Informatica is a service provider company specialized in the Cultural Heritage.

Our staff is composed by several professionals, information technology graduates, graphic designers, arts historian and photographers. Our peculiarity comes out from our team composition: we combine technical competences with historical and artistic knowledge and graphical skills.

We have realized many cataloguing projects, filing more than 400.000 subjects among artistic and cultural heritage, and various digitalization projects concerning more than 300.000 archival items.

In 2005 we've been certified with **UNI EN ISO 9001:2000** for our Computerized Cataloguing Process and the Cultural Heritage valorisation as well as for Historical Files Digitalization.

We provide a very high quality **digitalization** service of ancient books and documents. We own several scanners, three above all are planetary Metis' devices: one of them has a working plane for originals up to 65x110 cm and the other two up to 50x70 cm, the resolution goes up to 400 real optical ppi, the lighting system is UV&IR-free and all devices are equipped with an automatic book cradle. We can also digitalize photography funde (plate glass, pictures, negatives and slides) and any other kind of original.

We are expert in the **management and valorisation of the Cultural Heritage**; we have developed "E-Gallery", which is an intranet/internet application that enables the on-line publication and visualization of very high resolution images; it also provides a link to pre-existing cataloguing databases. An e-commerce optional module is also available.

We developed a specific product for video-referencing of bound books: **MidaBook** is a flexible, powerful and extraordinary simple system, able to present any kind of digitalized publication in a "virtual-book" format.

**MidaBook's** interface allows to experience a realistic and direct contact with the book thanks to the accurate and innovative graphic effects.

We've realized many multimedia, multi-platforms and multi-languages products distributed by means of CD-Rom and DVD.

We supply turn-key projects for Objects d'Arts **cataloguing** activities. We make use of the main SW packages available: SIRBeC (Lombardia), Sigec and Beni Culturali (CEI), complying with the Italian Government standard.

We've also developed a customizable cataloguing application.
